RowanUniversity

Seeking Adult Research Participants with:

Autism Spectrum Disorder, or Current or Past Depression

Individuals aged 18-45 are invited to participate in a study of thinking styles, feelings, and health. The study includes questionnaires, interviews, and looking at pictures on a computer screen. We are particularly interested in recruiting adults who:

- Have an autism spectrum disorder (ASD)
- Or have current depression (with no history of autism)
- Or are not currently depressed and have no history of autism

Participation is voluntary. This study will take about 5-7 hours of your time. For full participation, you will receive $100, a T-shirt, and selected assessment results.
